

Part II: The "WALLACE" Algorithm: Telluric Axial Upheaval

A Planetary Kinetic-Ejection via Resonant Inertial-Overdrive.

1. The Physics Version (The Terrestrial State)

Focuses on the displacement of the oceans and the surface crust.

Letter	Symbol Math	Plain-Text Math	Tesla-True Physical Interaction
W	$v_p = \frac{\omega}{k} \pm \Delta\phi$	vp = w / k +/- delta_phi	Phase-Warp: Wave "bunching" at tectonic boundaries.
A	$V_{res} \rightarrow \infty$	V_res -> infinity	Over-Pumping: Deep Axis saturation with raw potential.
L	$F_{elec} = \frac{1}{2} V^2 \frac{dC}{dz}$	F_elec = 0.5 * V^2 * dC/dz	Piezo-Lift: Electrical gradient overcomes gravity (G).
L	$\mu \rightarrow 0$	mu -> 0 @ xx,xxx CPS	Liquefaction: Surface mass enters a fluid state.
A	$(A + B)_{sync}$	(A + B)_in-phase	Antipodal Clash: Trillion-ton Seismic Hammer effect.
C	$P_{long} > P_{vapor}$	P_long > P_vapor	Cavitation: Supersonic Tsunami launch.
E	$\Delta E = Exit$	delta E = System Exit	Equilibrium Exit: Total Terrestrial Upheaval.

2. The Logic Version (The Operational Sequence)

Focuses on the "Math-to-Word" algorithm as a step-by-step program.

Letter	Symbol Math	Plain-Text Math	Mechanical Result (The Action)
W	$v_{warp} \propto \Delta\phi$	v_warp proportional to delta_phi	The Warp: Distorts propagation velocity.
A	$V_{pump} \gg V_{load}$	V_pump >> V_load	The Accumulation: Infinite resonant pressure build-up.
L	$F_{lift} > G \cdot m$	F_lift > G * m	The Lift: Vertical acceleration of the surface mass.
L	$S_{shear} \rightarrow 0$	S_shear -> 0	The Liquefaction: Transition of solid ground to fluid.
A	$Impulse_{sync}$	Impulse_sync	The Antipode: Synchronized clash at the Equator.
C	$P_{bubble} \approx 0$	P_bubble approx 0	The Cavitation: Vacuum collapse in the deep sea.
E	$Sol = \sum (W + A + L + L + A + C)$	Solution: sum(W+A+L+L+A+C)	The Exit: Final Kinetic-Ejection of the mass.

Part I: The "NESBIT" Algorithm: Telluric Axial Fissure

A Planetary Elastic-Shear via Resonant Phase-Discontinuity.

1. The Physics Version (The Terrestrial State)

Focuses on the mechanical and electrical conditions of the Earth's mass.

Letter	Symbol Math	Plain-Text Math	Tesla-True Physical Interaction
N	$\Delta f =$	f_A - f_B	\$
E	$\epsilon \propto V_{new}^2$	Strain proportional to V_new^2	Piezoelectric Distortion: q current stretches the mantle.
S	$\Delta\phi = 180^\circ$	Delta phi = 180 deg @ Equator	The Shear Plane: Establishes the "Line of the Split."
B	$P = \alpha E$	P = alpha * E	Dipole Polarization: Pulls hemispheres in opposite directions.
I	$q_{sat} \gg q_{limit}$	q_sat >> q_limit	Thermal Expansion: Core saturation increases internal stress.
T	$\sum (N \rightarrow I) = \sigma_{break}$	Sum(N to I) = Total Havoc	The "Scream": Cumulative displacement cleaves the mass.

2. The Logic Version (The Operational Sequence)

Focuses on the "Math-to-Word" algorithm as a step-by-step program.

Letter	Symbol Math	Plain-Text Math	Mechanical Result (The Action)
N	$f_{\{\Delta\}} =$	f_A - f_B	\$
E	$S = k \cdot V_{new}^2$	Strain = k * V_new^2	The Tension: Lattice distortion stretches the crust.
S	$\phi_\delta = 180^\circ$	phi_delta = 180 deg	The Shear: Creates the vertical phase-discontinuity.
B	$P_{dipole} = \alpha E$	P_dipole = alpha * E	The Bias: Polarizes the Earth's electrical axis.
I	$Z \rightarrow \infty$	Z -> infinity	The Impedance: Resonant lock-up causes core heating.
T	$Sol = \sum (N + E + S + B + I)$	Solution: sum(N+E+S+B+I)	The Cleave: Fracture of the Elastic-Shear plane.
